ABOUT ME

Mid-level Full Stack Developer with solid experience developing web and native mobile applications. I have worked extensively with React Native, PHP, NodeJS, and Laravel. In my roles, I participate actively in the full software development life cycle, from architecture planning to final sprint delivery. Throughout my career as a developer, I've developed strong practices in security, UX, interface design, scalable architecture, versioning and collaborative development. I have significant experience working in Scrum environments contributing effectively to cross-functional teams.

EDUCATION

System Analysis and Development   August/2021
FATEC Prof. Jessen Vidal   December/2024
São José dos Campos, SP - Brazil

- Developed academic projects across multiple company contexts (aviation, navy, GIS softwares), learning to design new features and understand real customer needs.
- Used the Scrum methodology to organize workflow, planning and life cycle activities

STACKS

- React	- Angular	- NodeJs/Express	- Git/Github
- React Native/Expo	- Sass	- Python	- Vercel/Renderer
- Next	- MaterialUI/Vuetify	- Flask	- Figma
- Vue	- Tailwind CSS	- Laravel	- OpenAI/Ollama
- Inertia	- Axios	- MySQL/PostgreSQL	- SCRUM
- Firebase/Cloud Messaging	- Redux/Context API	- MongoDB	

PROFESSIONAL EXPERIENCE

Mobile Front-end Developer (October/2025 – Present)
Tria Software – São José dos Campos, SP - Brazil

- Development of a mobile application integrated with GIS technologies
- Responsible for front-end architecture, feature implementation, versioning and sprint deliveries
- Collaboration with cross-functional teams to ensure consistent UX and high-quality deliverables
- Maintenance, optimization and evolution of core application modules

Full Stack Developer (March/2025 – October/2025)
Boostech – São José dos Campos, SP - Brazil

- Active participation in the development and evolution of a YMS web application built with Laravel + Vue.js, delivering continuous improvements in usability, performance and scalability.
- Implementation and deployment of a mobile application (Android) using React Native + Expo, integrating native features and expanding the solution's reach
- Delivery of high-impact features aligned with best practices in UX and software architecture
- Definition and promotion of development best practices within the team, including clean code, commit standardization (Conventional Commits), and improvements version control workflows.

Front-end GIS Developer (September/2022 – March/2025)
Imagem Geosistemas

- Development of interactive applications focused on GIS (Geographic Information Systems), using React, TypeScript, ArcGIS API and Experience Builder custom widgets.
- Creation of Python Scripts for workflow automation and geospatial data processing
- Participation in technical consulting for mapping and development systems, supporting clients in the design and implementation of GIS solutions

LANGUAGES

- Portuguese (native)   - English (intermediate)
